Promotion of High Value Agriculture through Provision of Climate Smart Technology Package

1. Introduction
   - Present situation of high value agriculture
   - Need for climate smart technology package

2. Objectives
   - Increase crop yield
   - Reduce water consumption
   - Enhance soil health

3. Methodology
   - Selection of pilot sites
   - Implementation of technology
   - Evaluation of results

4. Beneficiaries
   - Smallholder farmers
   - Cooperatives
   - Government agencies

5. Challenges
   - Financial constraints
   - Technical difficulties
   - Lack of awareness

6. Sustainable practices
   - Crop rotation
   - Organic fertilizers
   - Water conservation

7. Conclusion
   - Importance of climate smart technology
   - Future prospects
